QUARTERLY CONSIDERATIONS

Q3, 2023

This report is intended for the exclusive use of clients or prospective clients of Crescent Wealth Advisory. Content is privileged and confidential. Dissemination or distribution is strictly prohibited. Information has been obtained from a variety of sources which are believed though not guaranteed to be accurate. Past performance does not indicate future performance and there is a possibility of a loss. This paper does not represent a specific investment recommendation. Please consult with your advisor, attorney and accountant, as appropriate, regarding specific advice.

1. We are likely at or near the peak cycle Federal Funds rate as the Fed evaluates a lagged impact from its monetary policy actions. Although markets consolidated a bit in the quarter on an evolving Fed narrative, a Fed “pause” and a higher for longer environment has historically resulted in favorable capital market returns.
2. Rising interest rates have increased the return outlook for fixed income and valuations look attractive relative to equities. Evaluating the new environment and the role fixed income plays in meeting investment objectives is top of mind for investors.
3. Inflation has improved significantly since peaking above nine percent in 2022 and is approaching the Fed’s two percent target. However, the final steps will likely be the hardest to overcome and the path may not be linear.

Performance Following the Fed’s Last Hike – Next 12 Months

Financial markets have performed well following the Federal Reserve’s last rate hike, historically re-pricing ahead of the Fed. For example, the 10-year U.S. Treasury yield typically peaks prior to a Fed pause.

Date of Last Fed Rate Hike	“Pause” (Months to Next Cut)	Forward 3-Year Return from Date of Last Rate Hike (%)		
		Bbg Agg	1-3m Tbill	S&P 500
12/20/2018	7.5	5.0	0.9	25.0
6/29/2006	14.9	6.6	3.1	-8.0
5/16/2000	7.7	11.1	3.4	-12.4
3/25/1997	18.4	6.3	5.2	26.5
2/1/1995	5.2	10.2	5.5	30.5
Averages		7.8	3.6	12.3

Sources: Federal Reserve, FactSet, Morningstar Direct. As of September 30, 2023. Indexes used are Bloomberg U.S. Aggregate Bond Index, Bloomberg 1-3m TBill Index, and S&P 500 Index.

Relative Valuations Between Equity and Fixed Income

Bond yields have risen and the relative valuation gap between U.S. equity and fixed income has converged to nearly equal levels, the closest valuations have been in over 20 years.

Source: FactSet. As of September 30, 2023.

Oil Prices Ticked Higher in the Quarter

Oil prices moved higher during the third quarter on the back of continued supply constraints from OPEC. Commodity prices are a large component of inflation and are one of the many factors that may contribute to the volatile path toward target inflation levels.

Source: FactSet. Oil as of September 30, 2023; CPI as of August 31, 2023.

ECONOMIC REVIEW

U.S. Real GDP Growth

The U.S. economy remains resilient despite tightening monetary conditions. Favorable consumer spending and business investment helped propel growth in Q2 2023. Market expectations of recession have shifted significantly lower since the start of the year, but there are cautionary signs that may impact growth going forward.

Sources: FactSet, BEA. As of September 30, 2023.

S&P Case Shiller 20 City Home Price Index

The index fell on a year over year basis for the first time in over ten years. Home prices, which have been a stubbornly sticky portion of inflation, have moderated and may help ease inflation levels in the future.

Sources: FactSet, S&P/Case Shiller. As of July 31, 2023.

Rising Consumer Debt – Ex Mortgages

The U.S. consumer has been strong over the past few years but growing debt levels, rising delinquencies, increased cost of financing, declining savings, and the resumption of student loan payments, may test consumer resilience going forward.

Source: Federal Reserve Bank of New York. As of Q2 2023

Office Only a Small Portion of REIT Market

Commercial real estate continues to garner headlines, driven by weakness in the office market. While the office space certainly deserves attention, it only accounts for a small portion of the REIT market and fundamentals remain healthy across other property types.

Source: Morningstar Direct. As of September 30, 2023. Sector weights of the FTSE Nareit Equity REIT Index.

ASSET CLASS RETURNS

Source: Morningstar Direct. As of September 30, 2023. *Hedge fund returns as of August 31, 2023.

Fixed Income (3Q)

- Volatility continued in fixed income markets and most segments posted negative returns. Interest rates rose as markets digested the possibility of a higher-for-longer regime from the Federal Reserve as the central bank continues to tackle bringing inflation to target levels.
- + High yield fared best as the segment, which has a lower duration profile than core fixed income, is less sensitive to interest rate changes.
- Long duration assets saw large declines in the quarter as longer dated rates experienced a sharp jump higher in the quarter.

Equity (3Q)

- Equities were broadly lower in the period as higher interest rates led to a re-pricing of valuations. U.S. large cap outperformed small cap.
- Developed non-U.S. struggled in the quarter. The Eurozone continues to have weak economic activity and central banks remain in tightening stances.
- Emerging markets outperformed in the quarter but were still negative on an absolute basis. Positive momentum in the Indian economy provided a tailwind for the emerging region.

Real Asset / Alternatives (3Q)

- REITs took a step back during the period. Self-storage, Diversified and Residential were among the worst performing sub-sectors.
- + Commodities were a standout in the third quarter. Strong results stemmed from a jump in oil prices.
- + Hedge funds (reported on a month lag) posted a positive return for the first two months of the quarter. Event Driven and Relative Value strategies were among the top performing components.

See disclosures for list of indices representing each asset class. Past performance does not indicate future performance and there is a possibility of a loss.

FIXED INCOME MARKET UPDATE

U.S. Treasury Yield Curve

Interest rates rose across the yield curve during the quarter. The Fed paused in September following July's 25 basis point hike. The prospect of a higher-for-longer environment as inflation moves closer to the 2% target was a main driver of the move higher.

Source: FactSet. As of September 29, 2023.

Index Performance Attribution (3Q 2023)

"Risk-on" sentiment early in the quarter fueled the corporate high yield market as fundamentals remain favorable and supply has been constrained. The MBS market continues to struggle amid the volatile and rising interest rate environment.

Source: FactSet. As of September 29, 2023.

Corporate Market Spreads – Trailing 5 Years

Corporate credit spreads ended the quarter essentially where they began. After a strong rally in July, spreads widened to end the quarter. Issuance ticked up in September but remains low relative to previous years.

Source: FactSet. As of September 29, 2023.

Current Yield-to-Worst vs. 1 Year Ago

Yields continue to rise, fueled primarily by increasing interest rates as credit spreads have remained subdued. The return outlook for fixed income looks more attractive compared to this time last year.

Source: FactSet. As of September 29, 2023. Based on respective Bloomberg Index.

See disclosures for list of indices representing each asset class. Past performance does not indicate future performance and there is a possibility of a loss.

EQUITY MARKET UPDATE

Equity Valuations (Trailing PE – Last 15 Years)

Equity valuations compressed in the third quarter as prices fell. Higher rates were the main culprit of the repricing. Non-U.S. markets continue to look favorably valued relative to the U.S.

Source: FactSet. As of September 29, 2023.

U.S. Equities – Return by Sector (3Q 2023)

Energy and communication services were the lone positive sectors in the quarter. Energy benefited from a spike in oil prices, while Alphabet and Meta were top contributors within the communication sector.

Source: Morningstar Direct. As of September 30, 2023. Total Returns.

Country Total Returns (%) – Top 10 Largest Economies

Most global equity markets saw declining returns during the third quarter, but still remain positive year to date. A higher-for-longer interest rate environment prompted much of the sell-off for developed markets as investors weighed the potential impact to future economic growth and the effect on corporate earnings. Much of Europe struggled, with key countries such as Germany reporting negative GDP growth. On the other hand, India was a bright spot on the back of favorable economic data.

Source: Morningstar Direct. As of September 30, 2023.

See disclosures for list of indices representing each asset class. Past performance does not indicate future performance and there is a possibility of a loss.

REAL ASSET MARKET UPDATE

Commodity Performance

Commodities overall posted a positive return, but underlying results were mixed. Energy was the clear leader in the quarter, driven by constrained supply from OPEC, with oil prices approaching \$100 a barrel.

Source: Morningstar Direct. As of September 30, 2023.

REIT Sector Performance

The general equity selloff and greater interest rate sensitivity of REITs pushed the segment lower. The Diversified sub-sector was among the worst in the quarter as Towers, which are a large component, came under pressure amid concerns surrounding cable lines polluting rivers.

Source: Morningstar Direct. As of September 30, 2023.

See disclosures for list of indices representing each asset class. Past performance does not indicate future performance and there is a possibility of a loss.

MATERIAL RISKS & LIMITATIONS

Fixed Income securities are subject to interest rate risks, the risk of default and liquidity risk. U.S. investors exposed to non-U.S. fixed income may also be subject to currency risk and fluctuations.

Cash may be subject to the loss of principal and over longer period of time may lose purchasing power due to inflation.

Domestic Equity can be volatile. The rise or fall in prices take place for a number of reasons including, but not limited to changes to underlying company conditions, sector or industry factors, or other macro events. These may happen quickly and unpredictably.

International Equity can be volatile. The rise or fall in prices take place for a number of reasons including, but not limited to changes to underlying company conditions, sector or industry impacts, or other macro events. These may happen quickly and unpredictably. International equity allocations may also be impact by currency and/or country specific risks which may result in lower liquidity in some markets.

Real Assets can be volatile and may include asset segments that may have greater volatility than investment in traditional equity securities. Such volatility could be influenced by a myriad of factors including, but not limited to overall market volatility, changes in interest rates, political and regulatory developments, or other exogenous events like weather or natural disaster.

Private Equity involves higher risk and is suitable only for sophisticated investors. Along with traditional equity market risks, private equity investments are also subject to higher fees, lower liquidity and the potential for leverage that may amplify volatility and/or the potential loss of capital.

Private Credit involves higher risk and is suitable only for sophisticated investors. These assets are subject to interest rate risks, the risk of default and limited liquidity. U.S. investors exposed to non-U.S. private credit may also be subject to currency risk and fluctuations.

Private Real Estate involves higher risk and is suitable only for sophisticated investors. Real estate assets can be volatile and may include unique risks to the asset class like leverage and/or industry, sector or geographical concentration. Declines in real estate value may take place for a number of reasons including, but are not limited to economic conditions, change in condition of the underlying property or defaults by the borrow.

Marketable Alternatives involves higher risk and is suitable only for sophisticated investors. Along with traditional market risks, marketable alternatives are also subject to higher fees, lower liquidity and the potential for leverage that may amplify volatility or the potential for loss of capital. Additionally, short selling involved certain risks including, but not limited to additional costs, and the potential for unlimited loss on certain short sale positions.

DISCLOSURES – INDEX & BENCHMARK DEFINITIONS

Index & Benchmark Definitions

Fixed Income

- **Bloomberg 1-3 Month U.S. Treasury Bill Index** is designed to measure the performance of public obligations of the U.S. Treasury that have a remaining maturity of greater than or equal to 1 month and less than 3 months.
- **Bloomberg U.S. Aggregate Index** covers the U.S. investment grade fixed rate bond market, with index components for government and corporate securities, mortgage pass-through securities, and asset-backed securities.
- **Bloomberg Global Aggregate ex. USD Indices** represent a broad-based measure of the global investment-grade fixed income markets. The two major components of this index are the Pan-European Aggregate and the Asian-Pacific Aggregate Indices. The index also includes Eurodollar and Euro-Yen corporate bonds and Canadian government, agency and corporate securities.
- **Bloomberg U.S. Corporate High Yield Index** covers the universe of fixed rate, non-investment grade debt. Eurobonds and debt issues from countries designated as emerging markets (sovereign rating of Baa1/BBB+/BBB+ and below using the middle of Moody's, S&P, and Fitch) are excluded, but Canadian and global bonds (SEC registered) of issuers in non-EMG countries are included.
- **Bloomberg US Government/Credit 1-3 Year Index** is the 1-3 year component of the U.S. Government/Credit Index, which includes securities in the Government and Credit Indices. The Government Index includes treasuries and agencies, while the credit index includes publicly issued U.S. corporate and foreign debentures and secured notes that meet specified maturity, liquidity, and quality requirements.
- **Bloomberg US Government/Credit Long Index** is the Long component of the U.S. Government/Credit Index, which includes securities in the Government and Credit Indices. - **MSCI Emerging Markets Value Index** captures large and mid-cap securities exhibiting overall value style characteristics across Emerging Markets countries. The value investment style characteristics for index construction are defined using three variables: book value to price, 12-month forward earnings to price and dividend yield.
- **MSCI Emerging Markets Index** captures large and mid-cap representation across Emerging Markets countries. The index covers approximately 85% of the free-float adjusted market capitalization in each country.
- **MSCI Emerging Markets Growth Index** captures large and mid-cap representation across Emerging Markets countries. The growth investment style characteristics for index construction are defined using five variables: long-term forward EPS growth rate, short-term forward EPS growth rate, current internal growth rate and long-term historical EPS growth trend and long-term historical sales per share growth trend.
- **MSCI Emerging Markets Index** captures large and mid-cap representation across Emerging Markets countries. The index covers approximately 85% of the free-float adjusted market capitalization in each country.
- **MSCI Emerging Markets (EM) Small Cap Index** includes small cap representation across Emerging Markets countries. The index covers approximately 14% of the free float-adjusted market capitalization in each country. The small cap segment tends to capture more local economic and sector characteristics relative to larger Emerging Markets capitalization segments.

Alternatives & Miscellaneous

- **S&P Real Asset Index** is designed to measure global property, infrastructure, commodities, and inflation-linked bonds using liquid and investable component indices that track public equities, fixed income, and futures. In the index, equity holds 50% weight, commodities 10%, and fixed income 40%.
- **FTSE Nareit Equity REITs Index** contains all Equity REITs not designed as Timber REITs or Infrastructure REITs.
- **FTSE EPRA Nareit Developed Index** is designed to track the performance of listed real estate companies and REITs worldwide.
- **FTSE EPRA Nareit Developed ex US Index** is a subset of the FTSE EPRA Nareit Developed Index and is designed to track the performance of listed real estate companies and REITs in developed markets excluding the US.
- **Bloomberg Commodity Index** is calculated on an excess return basis and reflects commodity futures price movements. The index rebalances annually weighted 2/3 by trading volume and 1/3 by world production and weight-caps are applied at the commodity, sector and group level for diversification.
- **HFRI Asset Weighted Composite Index** is a global, asset-weighted index comprised of single-manager funds that report to HFR Database. Constituent funds report monthly net of all fees performance in US Dollar and have a minimum of \$50 Million under management or \$10 Million under management and a twelve (12) month track record of active performance. The HFRI Asset Weighted Composite Index does not include Funds of Hedge Funds. The constituent funds of the HFRI Asset Weighted Composite Index are weighted according to the AUM reported by each fund for the prior month.
- **HFRI Fund of Funds Composite Index** is a global, equal-weighted index of all fund of hedge funds that report to the HFR Database. Constituent funds report monthly net of all fees performance in U.S. Dollars and have a minimum of \$50 million under management or a twelve (12) month track record of active performance.
- **The Alerian MLP Index** is a float adjusted, capitalization-weighted index, whose constituents represent approximately 85% of total float-adjusted market capitalization, is disseminated real-time on a price-return basis (AMZ) and on a total-return basis.

Additional Information

- Equity sector returns are calculated by S&P, Russell, and MSCI for domestic and international markets, respectively. S&P and MSCI sector definitions correspond to the GICS® classification (Global Industry Classification System); Russell uses its own sector and industry classifications.
- MSCI country indices are free float-adjusted market capitalization indices that are designed to measure equity market performance of approximately 85% of the market capitalization in each specific country.
- Currency returns are calculated using FactSet's historical spot rates and are calculated using the U.S. dollar as the base currency.
